

Dr. Peter Holmgren

The total climate effect needs to be taken into account

1

Carbon sink

Growing forests with an increasing timber volume sink

55

MtCO2e/yr net

2

Fossil reduction

Products from the forest replace fossil based ones

42

MtCO2e/yr

3

Fossil emissions

Fossil emissions from industrial processes, transportation and input materials

4

MtCO2e/yr

Overall effect on climate change efforts

Sweden's forestry sector is climate positive with an overall climate effect of
